

Backlog Refinement

The main goals for this sprint:

- Like pictures
- View text posts and image posts in same recycler view
- List chats
- Archive chats
- Post texts

The development team had a few questions for the client:

- What does our main priority look like
- In what format should the image and text posts be like
- Colour of the buttons
- Structure of the recycler view
- List of following and follower
- Dimensions of profile picture

User stories:

- As a user, I should be able to post text and images so that other users can see them
- As a user, I should be able to view picture and text posts so that they are in one activity
- As a user, I should be able to list the chats so that I can be able to see the people I just spoke with
- As a user, I should be able to archive chats so that I can prioritise other chats
- As a user, I should be able to sign out of my account so that other users can sign in
