

Sprint Review 2

On 21 September 2022, we met with Mr. Michael, for Sprint 2 planning as planned. The main objective was to show him what we worked on in sprint 2. Our main challenge in sprint 2 was loadshedding hence most of the developers did perform to their full potential but we tried our best. Overall the customer was impressed by our current product. He however wanted us to modify a few things which we are going to do in the next sprint.

Suggestions:

The main issue suggested is we used the same color palettes throughout the application. This helps the application look professional without looking too busy.
