

# **BACKLOG REFINEMENT**

The main goals of this sprint were:

- Login
- Sign up
- Posting
- Chat

The development team had a few questions to product owner for clarity:

- What type of interface do you want?
- How would you like the app to be like?
- What type of uploads should be available?
- Any special, specific file extensions to be added?
- Any special differences between the users
- Which theme colours do you want?
- Button style to be implemented
- Any extra features to be implemented?

## **User stories**

- As a user, I should be able to register an account so that I can log in – 8
- As a user, I should be able to post a picture, so that it appears on posts
- As a user, I should be able to search a user so that I can chat with them
- As a user, I should be able to views posts so that I can see who posted

## Taiga Review

We analysed our graph on Taiga under the backlog branch and it showed that we are in line with all our targets which is a good sign of progress. The main impediment so far is load shedding. Most if not all our development team has been affected by load shedding thus this slows down progress
