

# SPRINT REVIEW 1

On Wednesday 7 September, we met the client, Mr Michael De Dervalho, for a sprint review meeting. The main aim was to show him the product for this sprint and hear his comments on each implementation. This also helps us on our side so that we know if he is satisfied with job we are doing and if we are on the right track meeting his goal.

One the thing worth noting that Mr Michael said about the app interface is that he wants the button palettes to match with the rest of the interface so give the app a unique look. The main risk involved in this case is overloading the app interface with elements that might not be deemed necessary thus a simplified approach is to be take. The main impediment of the sprint was load shedding. Most of the development team have been affected by load shedding thus there cannot work to their full potential.

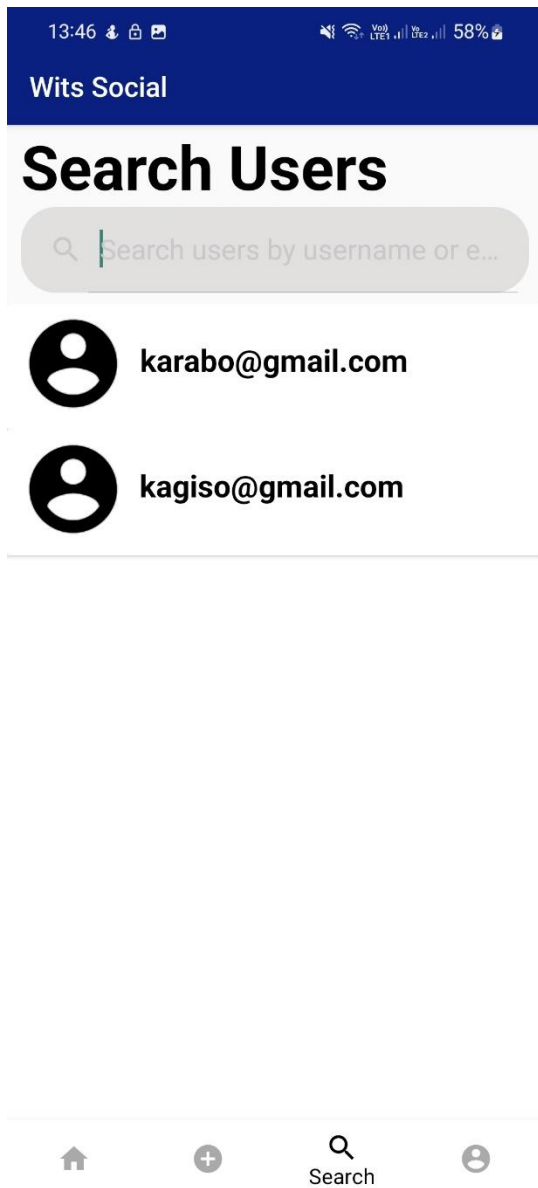

## Posting to the app

Mr Michael said he wanted the interface to add the post to be nicer and in sync with what we currently have.

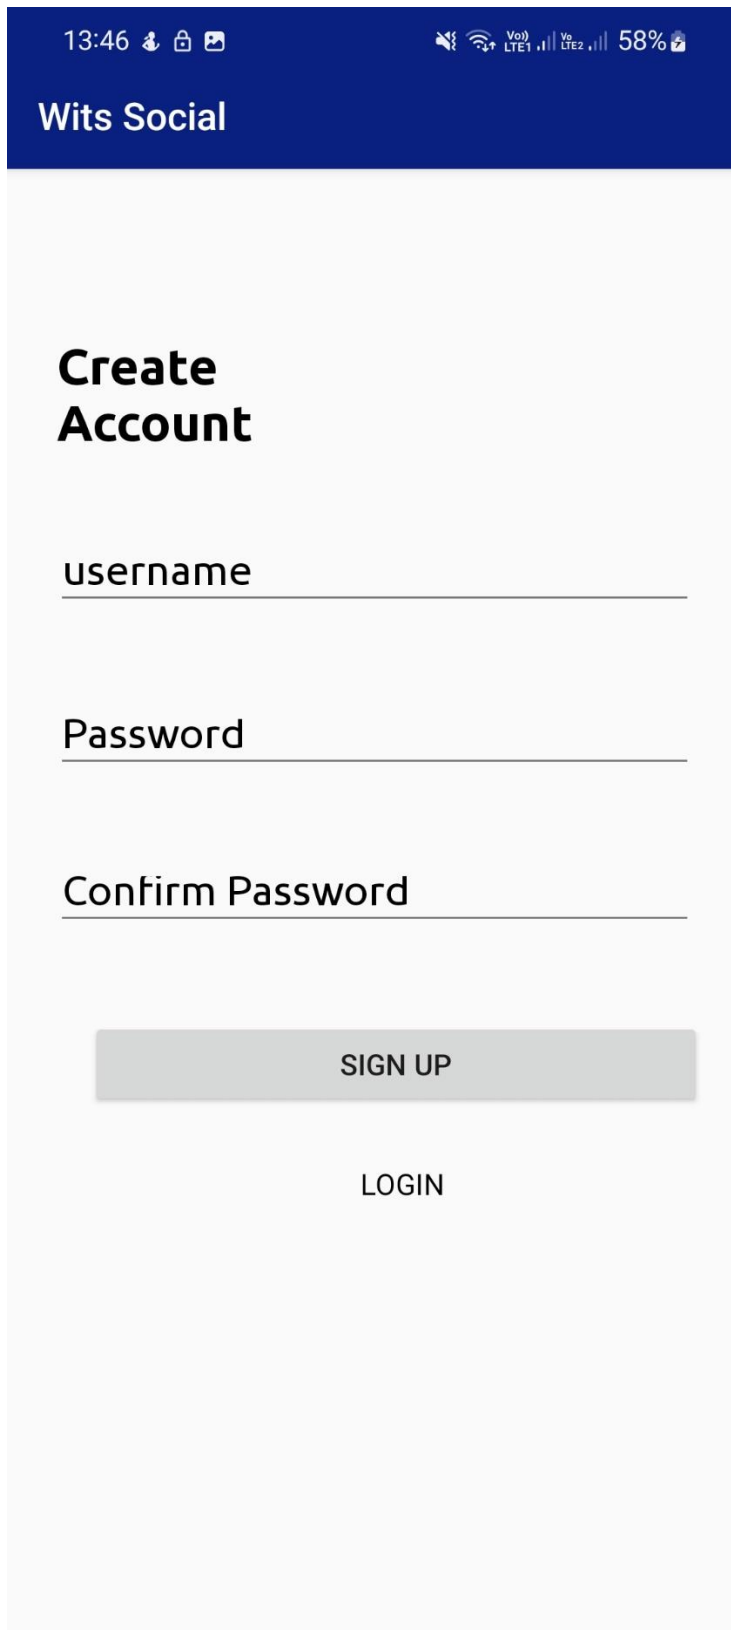

## Searching different users

He was satisfied by the way the search bar works but he said the search bar should smaller

## The sign up

The product owner was satisfied by the sign-up page

The screenshot shows a mobile application interface for 'Wits Social'. At the top, a dark blue header bar contains the app's name. Below this, the main content area is light gray and features the text 'Create Account' in a large, bold font. There are three input fields for 'username', 'Password', and 'Confirm Password', each with a horizontal line underneath. A gray button labeled 'SIGN UP' is positioned below the input fields, and a 'LOGIN' link is centered at the bottom of the page. The top of the screen shows a status bar with the time '13:46', various connectivity icons, and a battery level of '58%'.
