

Sprint Plan Meeting 2

On Tuesday 07 September 2022, we had a Sprint Planning with the client Mr. Michael. The purpose of this meeting was to discuss what we were going to work in the upcoming sprint. The client wanted us to achieve the following:

- **Editing profile**

The client wants the users to be able to edit their own profile page. The main focus should be that users should be able to add a descriptive bio of themselves. This allows each user to be distinct from every other user. What is a social app without profile pictures? We suggested that each user should be able to change their profile picture so that everything in the app is customizable.

- **Follow other users**

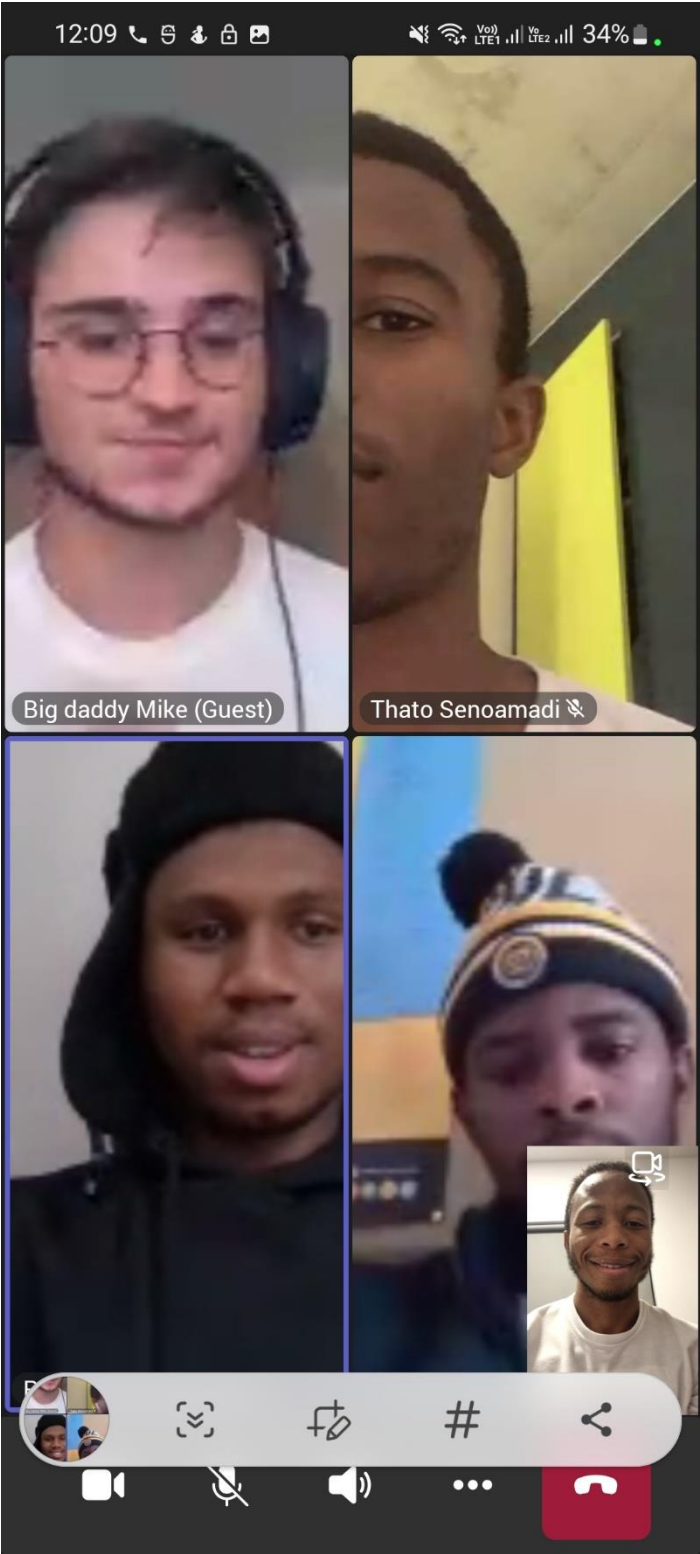

Mr Michael wants the users to be able to follow other users and he used Instagram and Twitter as examples of how the following works. Once a user starts following another user, their number of followers should increase or decrease according. This was amazing, lets see who has the most followers at the end of the day!!!

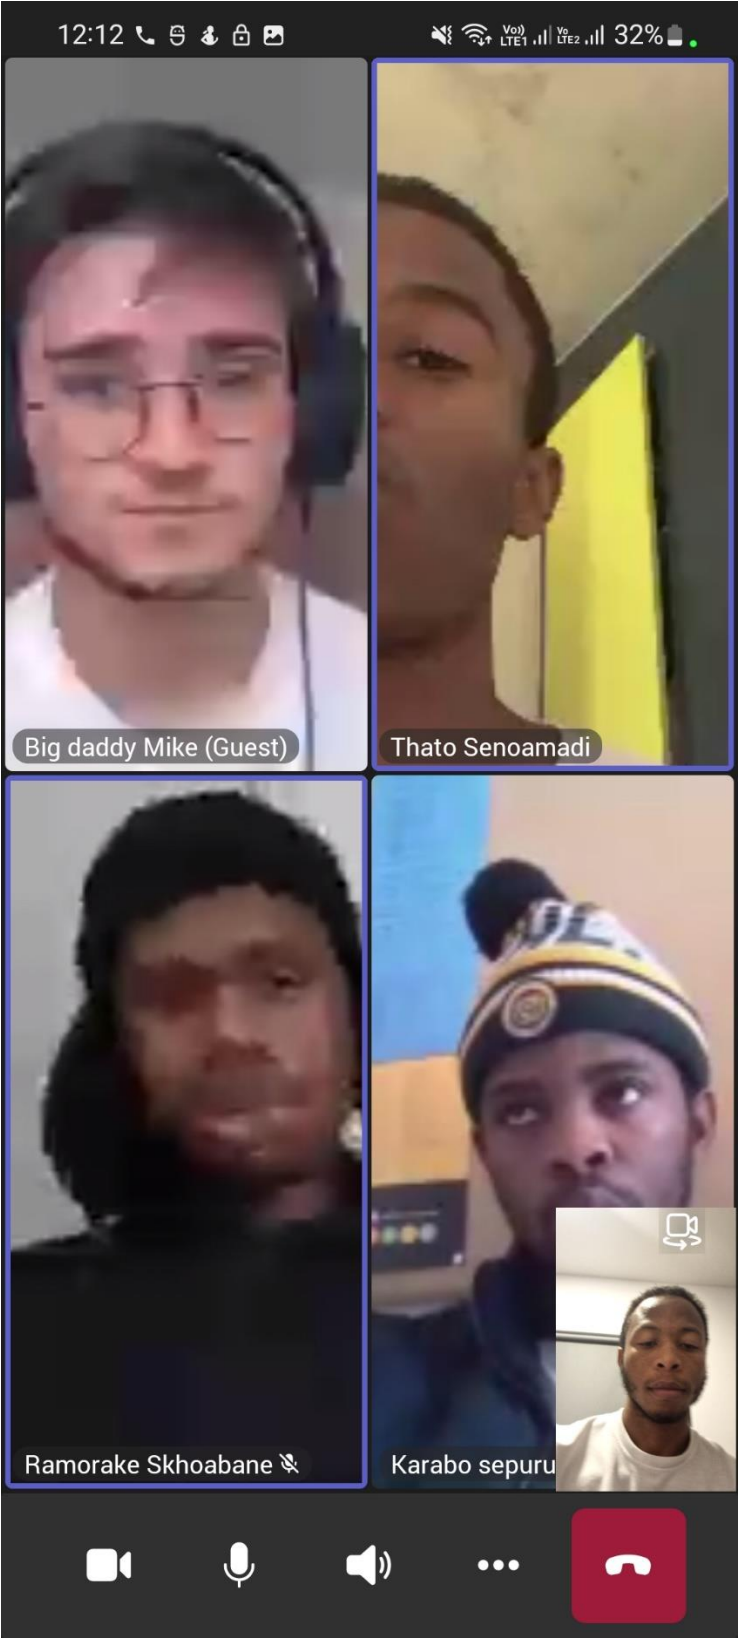

- **Search users**

This is going to be a very large app with a very large user base, as such there should be a feature that allows us to search a specific user using their credential, i.e., username or email. This makes it easy find a specific user we are looking for without going through all the users individually.

- **View other user's profile**

The product owner wants use to implement that allows the user to view another user's profile. This allows the user to see all the posts made by the user in question. It also allows the user to the number of followers.
