Sprint Retrospectives

Sprint 1

Everyone was trying to get to get to know the platforms and how to implement some of the basic features like logging in and doing the simple things making accounts, no one had any documentable issues which need attention

Sprint 2

The biggest issue was that one of our group members disappeared at some point and we had to take over his tasks, this was a real issue because we didn't hear from the members until the meeting with the marker

Sprint 3

The rouge team member came back and told us what was happening and why he was gone, although the issue was somewhat understandable we still took decisions to penalize him on the marks but still allow him to return to the group.

Sprint 4

For this sprint there were no notable issues just having to deal with merge conflicts and having to deal with polish. The Sprint went well and issues were dealt with.
